## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-46, drawn to a nonvolatile semiconductor memory having a specific erase circuit, classified in class 365, subclass 185.33.
  - II. Claims 47-57, drawn to a data renewal method, classified in class 365, subclass 185.29.
  - III. Claims 58-71, drawn to a data erase method having particular voltages, classified in class 365, subclass 185.18.
  - IV. Claims 72-87, drawn to a an embedded memory chip having a plurality of arrays having different cell units, classified in class 365, subclass 185.11.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and "II and III" or Inventions IV and "II and III" are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product (Invention I or Invention II) can be used in a materially different process (Invention II or Invention III) of using that product, for example, the method of invention II is different from the method of invention III by reciting different steps...

Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as use for data erasing before data writing by performing specific extracting electrons and hot hole injection from and into the floating gate. Invention III has separate utility such as use for supplying different voltages to the memory cell to perform data erasing. See MPEP § 806.05(d).

Inventions I and IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as use for dividing the cell units into blocks and for setting potentials of bit lines by a block unit at an erase time. In the instant case, invention IV has separate utility such as use for performing page-erase and page-write. See MPEP § 806.05(d).

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, different search and recognized divergent subject matter, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Huan Hoang whose telephone number is (571) 272-1779. The examiner can normally be reached on Mon-Fri 8:30AM-5:00PM.
